Scalability
testing

Stability testing

Configuration
testing

Performance testing will help you to:

- Increase visibility of product health
- Visualize product responsiveness in stress situations
- Performance testing results can be used as an input for further product development
- Improve optimization and load capabilities
- Reduce maintenance and support costs

PERFORMANCE TESTING OF A TRAINING MANAGEMENT SYSTEM

Germany-based provider of market leading training management system for aviation industry

A set of performance improvements

we were advised to the client by comparing the metrics for both product versions

TECHNOLOGIES

jMeter

vSphere

eViews

SOLUTION

The new product version was tested to see how it performed compared to the previous releases, whether it was not too slow and supported all the required functions:

Created two very similar environments with two product versions

Defined the most critical part of application from the performance perspective

Executed numerous test cases and collected performance metrics for analysis
